COMPREHENSION QUESTIONS

1- What is the aim of this new device (= appareil)?

The aim of this new device is to make communicating with hospital patients a little easier.

2- Why does the patient appreciate this new device?

*The patient appreciates the new device because she knows her call is not going to the **front desk** and everybody is hearing about it, and it's a lot faster.*

3- How can nurses use this device?

Nurses simply type in what they need and the computer shows them where to find it. They can also use smart IV pumps: alarms sound if a patient exceeds the programmed dose.

4- Why is this new device useful for surgeons (= chirurgiens)?

Surgeons use it to perform open procedures. There's less chance of infection because they don't have to peer over the body.

5- How much did this cost?

This new technology cost more than 8 million dollars.

6- What are doctors hoping for?

Doctors hope to save money by reducing errors and improving care.
